

RemoteConneX™ Phone

A PBX/KTS enabled home office phone for use with the RemoteConneX PBXgateway®

The RemoteConneX Phone, in conjunction with RemoteConneX PBXgateway, extends the features and benefits of your corporate phone out beyond the walls of your office and into the home office worker.

Installs into standard phone jack

Easy-to-use interactive menus

Increases productivity of teleworkers

Cost-effective alternative to OPX, IP phones and Centrex services

Creates user experience similar to PBX phone

Can also function as standard home phone

No external equipment necessary

Working from home just got easier

Now, seamless communication with the corporate office is just a button push away. The RemoteConneX Phone easily and conveniently delivers the most-commonly used PBX features and applications to the teleworker. Verso's distributed telephony solutions affordably and seamlessly extend the features and functionality of existing corporate voice systems to:

- Full-Time Teleworkers
- Part-Time Teleworkers across traditional and next-generation networks.

PBX Features and Functionality over Dial-Up Analog

Verso's RemoteConneX Phone is an easy-to-use, interactive screenphone that delivers PBX features and functionality to the teleworker over a standard dial-up analog connection. An alternative to expensive off-premise extensions (OPX), IP phones or complicated Centrex services, the RemoteConneX Phone easily installs into a home office to provide the teleworker with all of the most commonly-used PBX features and applications of the corporate voice system. Users can now enjoy an unprecedented level of communications capability previously unavailable on an analog phone connection.

Product Overview

Powered by the RemoteConneX PBXgateway, which operates at the corporate PBX location, the phone easily installs into any location equipped with a standard telephone jack (RJ-11) and AC power outlet. No external network equipment is necessary and users can even utilize their existing home telephone line without interruption.*

The large backlit display and softkey commands make navigation through the RemoteConneX Phone's interactive menus easy. Users can invoke the desired PBX feature by pressing the softkey next to the command on the display. Different indicators for PBX and home calls let the user know the source of the call. And, when not logged in to the RemoteConneX application, the RemoteConneX Phone also functions as a standard home phone.

The RemoteConneX Phone is an enhanced analog phone that is specially programmed for use with the RemoteConneX PBXgateway.

* Call Waiting Services required

The Application

The RemoteConneX PBXgateway is the driver behind the application. Installed next to the PBX at the corporate office, the RemoteConneX PBXgateway translates the softkey commands from the RemoteConneX Phone into PBX specific digital signaling. The user experience is similar to that of a digital PBX set - but at a fraction of the cost and operating expense.

The RemoteConneX Phone delivers the rich feature set of the corporate voice system to teleworkers including conference, transfer, hold, voice mail access/status and more.

All of the most commonly used features of the Avaya™ DEFINITY® ECS and Nortel Meridian® 1 are supported. The RemoteConneX application contains an enable/disable feature that controls the routing of calls to the RemoteConneX Phone, a feature that home office users will appreciate after hours.

Technical Specifications - RemoteConnex™ Phone

Features

- Multiple line appearances
- Internal extension dialing
- Conference
- Transfer
- Hold
- Flash
- One touch voice messaging access
- Voice mail status
